

Universal Imprägnierung KBT Protect

Coating for absorbent surfaces

General

Aqueous inorganic-organic coating material on self-organizing non-stick components give the surface an invisible layer with hydrophobic and oleophobic properties.

Applications

For all absorbent surfaces.

Dosage

Use undiluted.

Instructions for use

The agent should be liberally applied, by spraying, e.g. via an airless device, HVLP unit, or by using scrubbers and paint brushes. In any case, compatibility should be tested on an inconspicuous area. The application quantity depends on the substrate. Usually about 100 – 200 ml per m² is required.

The application of test areas is recommended in any case. This allows the consumption to be checked in each individual case. During application, the temperature of the surface and the air should be between +5°C and +40°C.

Drying:

Full effect is achieved after complete drying (at +10°C approx. 6 hours, at +20°C approx. 4 hours and at +30°C approx. 3 hours).

Important information

Surface preparation:

The surface to be treated should be dry and clean. Adhering loose impurities must be removed. Cleaning of tools: Simply clean tools with water.

The manufacturer accepts no liability for any damage resulting from the inappropriate use of the product.

Technical information

Shelf life:	minimum 2 years
pH:	concentrate: 7
Ingredients:	impregnating agents, Water
